

PRACTICAL NO 3

AIM : Creating Advanced Visualizations in Tableau

Step A: Creating Stacked and Grouped Bar Charts for Comparison

1. Connecting to the Dataset

1. Launch Tableau. Under the Connect panel, click on Text File, select your startup_funding.csv, and click Open.

2. Click on Sheet 1 at the bottom-left corner to enter your workspace.

3. Fix the Data Type: In the Data pane on the left, locate Amount in USD. Click the small Abc text icon next to it and select Number (Whole) from the dropdown menu to convert it into numeric data.

4. Convert to Measure: Right-click 'Amount in USD' in the Data pane and select 'Convert to Measure'. It will turn green and move to the bottom half of the pane.

SHETH L.U.J. AND SIR M.V. COLLEGE

2. Building a Stacked Bar Chart

1. From the Data Pane on the left, click and drag the InvestmentnType dimension onto the Columns shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

2. Drag the Amount in USD measure onto the Rows shelf.

3. Take the City Location dimension from the Data Pane and drop it directly onto the Color tile in the Marks card.

SHETH L.U.J. AND SIR M.V. COLLEGE

3. Converting to a Grouped Bar Chart (Side-by-Side)

1. Leave Amount in USD on the Rows shelf.

2. Take the City Location pill out of the Color tile on the Marks card and drag it up to the Columns shelf, placing it right next to (to the left of) the InvestmentnType pill.

Step B: Building Treemaps and Pie Charts for Part-to-Whole Analysis

1. Building a Treemap

1. Click the New Worksheet icon at the bottom of the screen to open a clean workspace (Sheet 2).
2. From the Data Pane, drag the Industry Vertical dimension and drop it onto the Columns Shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

3. Drag the Amount in USD measure and drop it onto the Rows shelf. (Tableau will default to generating a standard vertical bar chart).

4. Now, look at the very top-right corner of the window and click the Show Me button to expand the chart library panel.

5. From the options, click on the Treemap icon (it looks like a grid of nested colorful rectangles).

SHETH L.U.J. AND SIR M.V. COLLEGE

2. Building a Pie Chart

1. Click the New Worksheet icon to open another blank layout (Sheet 3).

SHETH L.U.J. AND SIR M.V. COLLEGE

2. Go back to the Show Me panel in the top-right corner and select the Pie Chart icon.

3. Notice that your Marks card changes to show an angle option. From the Data Pane, drag InvestmentnType and drop it onto the Color tile in the Marks card.

SHETH L.U.J. AND SIR M.V. COLLEGE

4. Drag Amount in USD from the Data Pane and drop it directly onto the Angle tile in the Marks card.

SHETH L.U.J. AND SIR M.V. COLLEGE

5. Enlarge the view: To make the pie chart legible, look at the top toolbar menu, find the fit dropdown menu (which says Standard by default), and switch it to Entire View.

SHETH L.U.J. AND SIR M.V. COLLEGE

Step C: Designing Scatter Plots to Identify Relationships

1. Cleaning the Data for Scatter Plots

A scatter plot maps relationships between two different numerical measures. However, in this dataset, we only have one explicit primary numeric field: Amount in USD.

To create a meaningful scatter plot, we will instruct Tableau to generate a second numerical measure dynamically by counting the number of times a startup name appears (representing the total number of funding rounds a startup went through).

2. Building the Scatter Plot

1. Click the New Worksheet icon at the bottom of your window to open a fresh canvas (Sheet 3).

2. Look down to the bottom of your Data Pane list under the green measures section. Locate the automatic system measure field called startup_funding.csv (Count) (in older versions of Tableau, this is called Number of Records).

SHETH L.U.J. AND SIR M.V. COLLEGE

3. Drag that Count or Number of Records measure and drop it onto the Columns shelf.

4. Drag your Amount in USD measure and drop it onto the Rows shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

o Look closely: Right now, you will see a single, isolated data dot in the center of your chart canvas. This is because Tableau automatically sums up the values for the entire dataset into a single aggregated point.

5. To break this single point down into individual startups, find the Startup Name dimension in the Data Pane.

SHETH L.U.J. AND SIR M.V. COLLEGE

6. Drag Startup Name and drop it directly onto the Detail tile within the Marks card.

7. Adding Context with Color: Take the City Location dimension from your Data Pane and drop it onto the Color tile in the Marks card.

The screenshot displays the Tableau Desktop environment. The main view is a scatter plot on 'Sheet 3'. The y-axis represents 'Amount in USD' ranging from 0M to 4M. The x-axis represents the 'Count of startup_funding.csv' ranging from 0 to 7. A single data point is plotted at a count of 1 with an amount slightly above 4M. The interface includes a top menu bar with options like File, Data, Worksheet, Dashboard, Story, Analysis, Map, Format, Server, Window, and Help. A left sidebar contains 'Data' and 'Analytics' tabs, with a search bar and a list of tables including 'City Location', 'Date dd/mm/yyyy', 'Industry Vertical', 'Investment Type', 'Investors Name', 'Remarks', 'Startup Name', 'Sub Vertical', and 'Measure Names'. The 'Columns' shelf contains 'CNT(startup_funding...)' and the 'Rows' shelf contains 'SUM(Amount in USD)'. A 'Marks' card is set to 'Automatic'. A right sidebar shows a 'Show Me' panel with various chart templates. The bottom status bar indicates 66 marks, 1 row by 1 column, and a sum of 3,044.

1. Preparing the Fields

We will use the Date dd/mm/yyyy column for time. Before we begin, let's make sure Tableau treats this text field as a proper date:

- T090_MADESH SIVAKUMAR

SHETH L.U.J. AND SIR M.V. COLLEGE

2. Building the Dual-Axis Chart

1. Click the New Worksheet icon at the bottom of the screen to open a fresh canvas (Sheet 5).
2. Drag your newly formatted Date dd/mm/yyyy dimension and drop it onto the Columns shelf. (Tableau will automatically group the dates into discrete Years).

3. Drag the Amount in USD measure from the Data Pane and drop it onto the Rows shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

4. Now, take the automatic system measure startup_funding.csv (Count) (or Number of Records) and drag it onto the Rows shelf, placing it directly to the right of the Amount in USD pill.

o Look closely: You will now see two separate line charts stacked vertically on top of each other.

3. Combining and Formatting the Visuals

1. Right-click the second measure pill (startup_funding.csv (Count)) sitting up on the Rows shelf.

2. Select Dual Axis from the context dropdown menu.

3. Look at your Marks Card area. Notice that it has split into three distinct tabs: All, SUM(Amount in USD), and CNT(startup_funding.csv).

SHETH L.U.J. AND SIR M.V. COLLEGE

4. Click directly on the SUM(Amount in USD) tab in the Marks card. Change its visual type dropdown selection from Automatic to Bar.

SHETH L.U.J. AND SIR M.V. COLLEGE

5. Next, click directly on the CNT(startup_funding.csv) tab in the Marks card. Change its visual type dropdown selection from Automatic to Line.

SHETH L.U.J. AND SIR M.V. COLLEGE

Step E: Developing Histograms for Distribution Analysis

1. Understanding Histograms in Tableau

A histogram splits a single continuous numerical measure into equal, consecutive intervals called Bins (e.g., separating funding amounts into bins of 0–10M, 10M–20M, etc.) and displays the frequency count of records falling within each bucket as a bar chart.

Because a histogram relies on a single continuous field to build its own bins, we don't manually drop fields onto both shelves like a normal bar chart.

2. Building the Histogram

1. Click the New Worksheet icon at the bottom of the screen to open a fresh canvas (Sheet 6).
2. Go to the Data Pane and click once directly on the Amount in USD measure to highlight it.

3. Move your mouse to the top-right corner of the window and click the Show Me button to expand the chart library panel.(Which is already Expanded)
4. From the options, locate and click the Histogram icon (found in the middle row, displaying vertical green bars).

SHETH L.U.J. AND SIR M.V. COLLEGE

5. Look back at your Data Pane. Notice that Tableau has automatically generated a brand-new field under your dimensions list called Amount in USD (bin) and placed it onto your Columns shelf.

6. Look at the Rows shelf. Tableau has automatically placed the aggregated measure CNT(Amount in USD) there to track record counts.

Step F: Building Box-and-Whisker Plots

1. Cleaning the View for Box Plots

A Box-and-Whisker plot is a statistical chart used to show the distribution of data values based on a five-number summary (Minimum, First Quartile, Median, Third Quartile, and Maximum). Because box plots measure structural distribution across data points, we must tell Tableau to look at the individual funding records rather than squishing everything into a single consolidated sum bar.

2. Building the Box-and-Whisker Plot

1. Click the New Worksheet icon at the bottom of the screen to open a fresh canvas (Sheet 7).

2. Drag the City Location dimension from the Data Pane and drop it onto the Columns shelf.

3. Drag the Amount in USD measure and drop it onto the Rows shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

4. Disaggregate the Data Points: Go to the top menu bar click Analysis, and uncheck Aggregate Measures.

o Look closely: Your layout will instantly transform from a single compressed mark into a vertical scattered line of hundreds of individual circular marks for each city column.

5. Add the Box Plot: Look at the top-right corner of the window, click the Show Me button, and select the Box-and-Whisker Plots icon (found in the middle row, showing a box shape with extended antenna lines).

6. Refining the Focus: Since there are many small towns with only one funding record, right-click the City Location pill on your Columns shelf, select Filter, choose only the top tier

hubs (e.g., Bengaluru, Mumbai, New Delhi, Gurgaon), and click OK to clean up your distribution view.

SHETH L.U.J. AND SIR M.V. COLLEGE

Step G: Using Gantt Charts and Advanced Date Visualizations

1. Understanding Gantt Charts in Tableau

A Gantt Chart is traditionally used to show project schedules and the duration of activities over time. In a standard Gantt chart, the horizontal axis (X-axis) represents a continuous timeline, marks are displayed as horizontal bars, and the length of each bar represents the duration of that specific event.

To build a meaningful duration layout using our funding dataset, we will calculate the time spread across funding dates or analyze milestone timelines. However, Tableau also allows us to use the Gantt Bar mark type to build advanced tracking timelines. Let's create an advanced chronological timeline of funding events.

2. Building an Advanced Date Gantt Timeline

1. Click the New Worksheet icon at the bottom of the screen to open a fresh canvas (Sheet 8).
2. Look at your left Data Pane. Right-click on your Date dd/mm/yyyy field and select Create > Calculated Field.

SHETH L.U.J. AND SIR M.V. COLLEGE

4. Drag your continuous Date dd/mm/yyyy field and drop it onto the Columns shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

o Adjustment: If Tableau groups it automatically as a discrete year pill (blue YEAR(Date) pill), right-click that pill on the Columns shelf and select the continuous Exact Date option from the middle section of the dropdown menu. The pill color will change to green.

5. Drag your Startup Name dimension from the Data Pane and drop it onto the Rows shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

6. Apply the Filter: Because there are thousands of startups, let's look at a focused subset. Drag Startup Name into your Filters shelf, select a few notable Indian tech giants (e.g., BYJU'S, Flipkart, Ola Cabs, Zomato), and hit OK.

7. Look at your Marks Card dropdown menu (which currently says Automatic). Click it and manually switch the mark style option to Gantt Bar.

SHETH L.U.J. AND SIR M.V. COLLEGE

8. Take your newly created calculated field Constant Duration from the Data Pane and drag it directly onto the Size tile inside your Marks card.

9. To make the timeline highly informative, drag your quantitative measure Amount in USD from the Data Pane and drop it directly onto the Color tile in the Marks card.

SHETH L.U.J. AND SIR M.V. COLLEGE
